

# the product suite

- efficiently manages and processes full life-cycle for policy, underwriting, billing, reinsurance, rating and claim
- modular, integrated, robust solution comprising of rules engine, reporting engine, workflow engine, imaging engine, query engine and database engine
- state-of-the-art framework for implementing changes quickly
- ACORD XML compliant

Finys ACORD compliant product suite is designed and developed with two specific goals in mind—improve time to market and improve ease of doing business. Tactically, these goals convert into building system that will allow for rapid changes AND building system that will allow for improvement in operational efficiency.

The modular, customizable product suite manages full policy life cycle, starting with new business acquisition to the renewals, underwriting, rate changes, amendments, bill generation, reconciliation, reinsurance and claim management. While processing the front office tasks, the suite keeps its back office functions in balance including financial and audit controls.

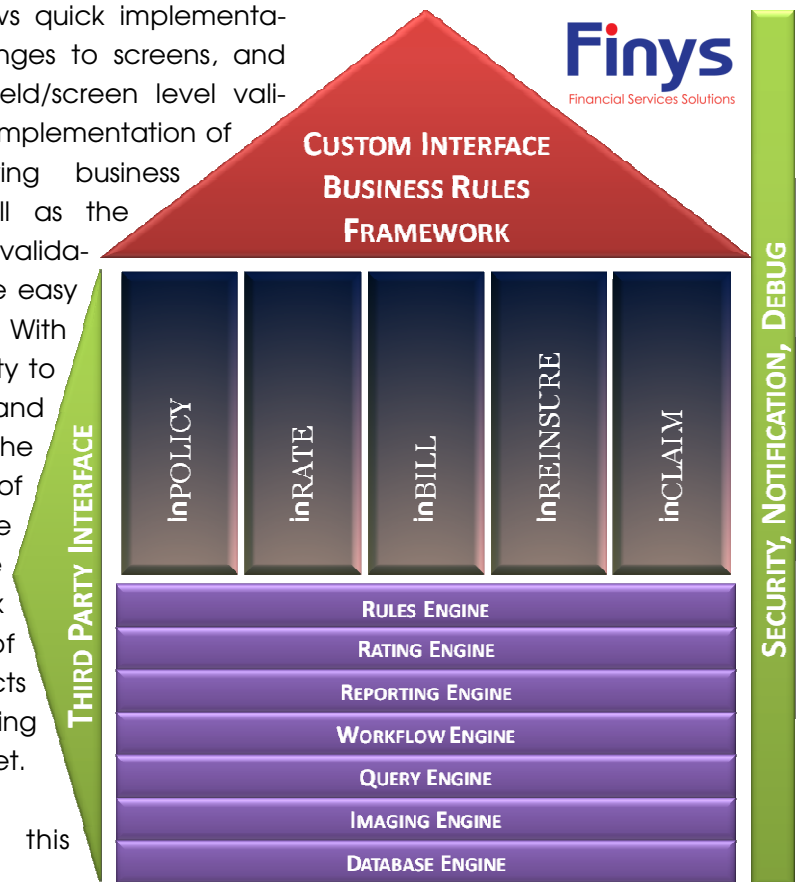

The user interface (UI) is highly modifiable. The built-in App Builder module allows quick implementations of changes to screens, and associated field/screen level validation. The implementation of the underlying business rules as well as the data entry validation rules are easy to modify. With inherent ability to customize and support for the new lines of business, the product suite offers quick roll-out of new products lines improving time-to-market.

Integrating this

suite with third party products is quick. With the core architecture and the framework, Finys' suite is able to integrate with many industry standard web services.

The product suite is developed using .NET framework for the thin client web browser deployment, allowing for ease of hot fixes and upgrades. The Service Oriented Architecture (SOA) facilitates interoperability between modules.

With support to multiple lines of business, agile integration points with third party products, ease of integrating new features and business rules, and the associated controls makes the product suite a superior product built using leading edge technology.

# property & casualty

## mod·u·lar

composed of standardized units for easy construction

Finys Property & Casualty suite has revolutionized the implementation of business change in IT systems. The web based, fully integrated, modular suite with superior operational and financial controls lends itself towards improving operational efficiency and improving time to market in the ever changing insurance world. The dynamic workflow engine in the suite enables creation of workflows for straight through processing of all operations. This framework based suite can quickly deploy new commercial and personal business lines without impacting existing implementation. The suite is well integrated with industry standard third party service providers for bidirectional data feeds. The suite and the modules are available out-of-a-box to be implemented in-house or as hosted Software as a Service (SaaS).
